Using a 1-3/16" diameter carpet cutter. Select the appropriate floor spacers as shown in the illustration to the left. Set those aside for use later into the installation process.</p> <p>Once you have prepared the carpet/floor mat for mounting, proceed to <b>STEP 02</b>.</p>
	<h2>Step 02</h2> <p><b>Prepare Mounting Locations</b></p>	<p>Using a drill and drill bit (see table at top of page for correct size) drill the mounting holes in the vehicle sheet metal to prepare for installing the plusnuts.</p> <p>If you are thru-bolting at any of the locations simply drill a hole that is 1/16" larger than the bolt size(s) for those locations.</p> <p>Once you have drilled the holes into the vehicle, the raw metal edges should be sealed using a self-etching primer to resist corrosion and potential fastener point failure.</p>
	<h2>Step 03</h2> <p><b>Setting Plusnuts</b></p>	<p>Use a Air Powered Plusnut Setting Gun to "set the plusnut" or if installing manually with hand tools, assembly the following.</p> <p><u>1/4-20UNC Plusnut (FAS0052)</u>        FAS0080 SCREW, HXHD, 1/4-20UNCx2.00", G8        FAS0067 WASHER, FLAT, 1/4"ID        22200-0 PLUSNUT TOOL</p> <p><u>5/16-18UNC Plusnut (FAS0091)</u>        FAS0095 SCREW, HXHD, 5/16-18UNCx2.00", G8        FAS0086 WASHER, FLAT, 5/16"ID        22200-0 PLUSNUT TOOL</p> <p>Place barrel of the plusnut body in sheet metal thru hole until flange is flush with sheet metal.</p> <p>Using a 9/16" combination wrench of plusnut tool body and a second hand wrench, ratchet, or air tool, rotate the hex bolt head CW to draw plus nut flanges up (set the plusnut).</p> <p>Remove hex bolt, washer, and plusnut. ## Step 2 “ Installing header rail with optional side panels”

If you are installing the Rail kit with the optional side panels, you will need to remove ALL of the top Christmas tree clips so the rail can be installed and sit flush on the panels. This will be typical on both sides. Install as instructed in Step 6B.

## Step 3 “ Install slides and the Upper rails”

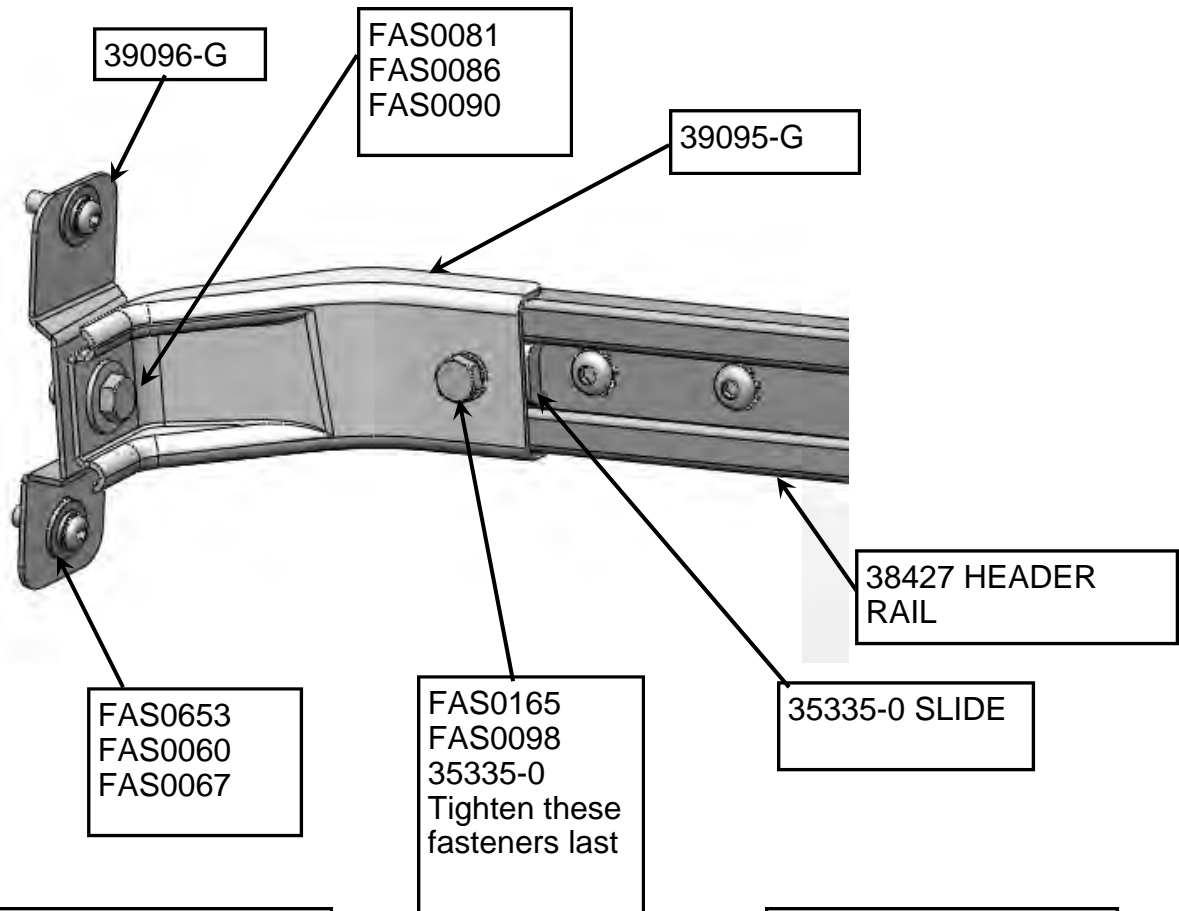

Install the (6) 35335-0 slides in the appropriate rail as described below. Position the Street side rail in the upper position with the 3-hole end towards the partition. Finger tighten all rail fasteners in place. Do the same on the Curb side Header rail. After all fasteners are in, go back and tighten all except for the front three so the partition installation bracket can be installed.

## Step 4 “ Install street side D-Pillar mounting brackets”

Assemble and install the D-Pillar brackets. Finger tighten all fasteners in place, then tighten the rear mounting ones first and then the one to the rail last.
