

Introduction / Comments:

Install Instructions For Exterior Plug & Play Lights For Promaster

Note:

Read all instructions prior to installation. Review the Adrian Steel **GENERAL PRECAUTIONS PAGES (56638)** before attempting installation. Only personnel familiar with using electrical best practices should perform this install. Reference **ELECTRICAL BEST PRACTICES MANUAL (54479)** before attempting installation.

Installation Instructions For Exterior Plug And Play Lights For Promaster

*****TORQUE*****
Torque all strobe fasteners to 10 in-lbs.
DO NOT OVER TIGHTEN

DO NOT MOUNT ON A CURVED SURFACE

Best Practices to Follow when Routing Through Firewall:

- Create a drip loop with the harness being routed through the firewall as shown so that the water does not flow into the grommet.
- Make sure that the proper grommet for the hole being routed through is used so that there are no openings for water to get through.
- Use silicone after routing and apply around the grommet and wire to seal it. Make sure to let the silicone dry for 30 minutes to an hour.

Apply silicone around the grommet and wire loom so that it is completely sealed.

Drip loop created so water runs off of loom and not into the cab of the vehicle.

****Please read statement below before moving forward****

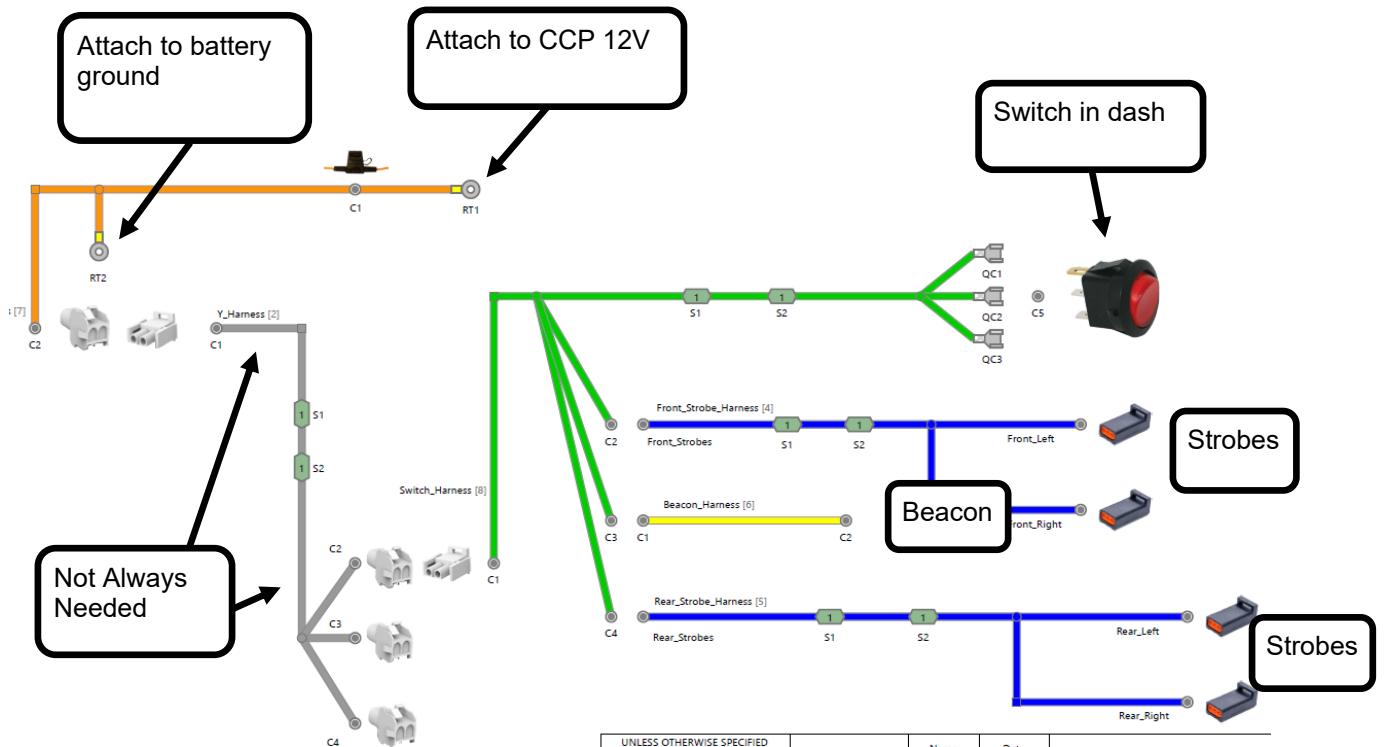

Before installation, disconnect the OEM negative battery cable.

These plug and play kits are completely modular and can be configured in many different ways. Placement of lights will be determined by sales order drawings/customer ask. Therefore, these instructions are for the most standard configurations, and for reference only.

Please reference the order drawing and spec sheet to see what components are going to be installed on this particular upfit.

These installation instructions are for most cases and for reference. Not all installs will have strobes, beacons, and lightbars. Reference the instructions for only what you are installing.

Overall Harness Diagram

Tools required:

M8 socket

Phillips bit, 1/2" drill bit and 5/16" step drill bit

Power drill and impact

Torque wrench

Components

	Part Number	Description
1	67094	Power Harness #3
2	67100	Switch Harness #4
3	67101	Front Strobe Harness #1 (If Applicable)
4	67110	Rear Strobe Harness #5 (If Applicable)
5	67114 or 67115	Beacon/Lightbar Harness #4 or 5 (If Applicable)
6	67686 or 67687	Strobes (If Applicable)
7	67689 or 67690	Beacons (If Applicable)
8	51545	Beacon Ladder rack Mount (If Applicable)
9	50368	Beacon Cage (If Applicable)

The purpose of plug and play lighting is to be completely modular. Due to this feature, refer to the order drawing for all exact lighting placements. These installation instructions are for most cases and for reference. Not all installs will have strobes, beacons, and lightbars. Reference the instructions for only what you are installing.

Harness pictures are for reference only.

Placements

Switch placement: Under Radio
On Dash

Front Strobes: Front Bumper

*****TORQUE STROBES TO 10-IN-LB'S
MAXIMUM*****

Beacon or Lightbar: On Ladder
Rack

Rear Strobes: Above Rear Lights.
High roof will be above hinges, low
roof will be below hinges.

Routing Overview

Color	Key - Items
Yellow	Strobes - Front strobe harness
Red/Black	Power harness: Battery to kick panel
Orange	Switch harness: Switch in dash
Blue	Beacon harness: Switch to beacon
Purple	Strobes - Rear strobe harness

Step 1: Locate the power harness #67094.
Remove the fuse from the inline fuse holder until the end of the install.

Driver's Foot Area:
Locate the OEM battery under the cover. Figure 7.1 and 7.2.

Remove the red positive battery cover. Figure 7.3.

Attach the red wire with the ring terminal to the 12V positive post.
Attach the black wire with the ring terminal to the battery ground post. Figure 7.3.

Route the white connector end towards the driver's foot well. Figure 7.4. Remove any needed trim to route wires. Keep the trim removed for beacon or strobe routing.

12V Positive

Ground Bolt

Power harness

Switch Harness

Figure 8.1

Figure 8.2

Figure 8.3

Step 2: Locate the switch harness #67100

Connect the switch harness connector to the power harness in the kick panel area.

IF NEED: Use a trim tool to carefully remove the knee bolster panel. Figure 8.1.

Locate the farthest right side of the knee bolster panel, shown in figure 8.2. Measure and mark 1.5" down and centered in the square. Drill a hole in the center of the trim panel for the switch: A hole diameter of 3/4" (19mm) is necessary to install the snap in switch (do not insert switch yet).

If an inverter switch is already in this place, move the strobe switch to the left of the inverter switch, directly in line with it. Or however you can fit both switches in the same panel.

Using a fish tape: Route the switch end of the switch harness under the steering column behind the panels and through the opening in the switch location. AVOID MOVING/ROTATING OBJECTS. Figure 8.3. Secure with zip ties.

Connect the ground spade to the gold pin on the rocker switch

Connect the white battery power spade to the opposite terminal on the switch.

Connect the red spade to the middle pin.

Insert the switch into the hole and place the strobe/beacon decal (if supplied) around the switch.

Reassemble all trim and secure wiring.

Strobe Install—If Applicable

Strobe pictures are for reference only. Please refer to product structure/spec sheets for the actual strobes for the install.

Figure 9.1

Step 1: (If you are installing a beacon, follow these routing steps with the beacon harness)

Locate the rear strobe harness #67110.

Connect the rear strobe harness to the switch harness (one of the remaining unused connectors) in the driver's foot well. Figure 9.1.

Step 2:

Locate the driver's side door sill area. Figure 9.2.

Carefully route the strobe harness through the door trim down to the floor.

Figure 9.2

Continue routing the harness down to the floor, under the sill trim, and under the driver's seat. See figure 9.3 for the routing path.

Re-insert trim that was pulled up after routing.

Route the harness up the partition and secure with zip-ties. Figure 9.4.

Figure 9.3

Figure 9.4

Figure 10.1

Step 3: Routing (Refer to routing diagrams at the beginning of the instructions)

Route the strobe harness rearward in the roof channel, to each of the strobe locations. Figures 10.1 and 10.2.

The first strobe connection will be made in the top driver's side D-pillar—circled in green. The second connection will be made in the top passenger side d-pillar. Figure 10.3.

Figure 10.2

You will need to remove the black trim panels in the D-pillar to make the strobe connections.
High roofs: Remove the Top trim panel.
Low roofs: Remove the bottom trim panel if mounting the strobes below the rear door hinges.

Step 4: Mounting Strobes

Locate the rear side doors (outside of van). Use the strobe as a template to make your needed holes.

Figure 10.3

High roof vans: Place the strobe above the door hinge (1"-2"), centered left/right. Use your best judgement for placement.

Low roof vans: If there is not enough room above the hinge for the strobe, place the strobe below the door hinges using your best judgement vertically (1"-2" down) and centered left/right.

Figure 10.4, Green circle is for high roof vans, orange circle is for low roof vans.

Drill a 1/2" hole for the wire pass through of the strobe.

Step 5: Using a fish tape, route the wire harness through the D-pillar channel up through the strobe wire pass through hole.

Tape up the non-needed blue or yellow wire on the strobe.
Use silicone to seal the wire pass through hole.

Figure 10.4

Place the strobes in their desired locations and fasten them onto the bumper with the supplied screws. You may want to drill pilot holes for ease of install.

*****TORQUE STROBES TO 10-IN-LB'S MAXIMUM*****

Do this for both passenger and driver side.

Figure 11.1

Step 5: Locate the front strobe harness #67101.

Connect the strobe harness to one of the unused connectors on the switch harness. Figure 11.1.

Step 6: Locate the OEM grommet located on the firewall.

It can be best seen by looking from the front bumper to the firewall, closer to the driver's side. See figure 11.2 for reference.

Cut a hole or "X" in the grommet for wire routing.

Route the outside connectors through the firewall grommet.

Continue routing the harness through the firewall and engine compartment to each of the strobe locations. Make sure to have a drip loop when routing.

Figures 11.3, 11.4, and 11.5. Routing path shown in red.

Secure with zip ties.

Be sure not to secure or route the harness anywhere near moving or hot objects.

Figure 11.2

Reference Pg. 3 for routing through the firewall.

Inside vehicle connector

Figure 11.4

Figure 11.3

Connector end that stays in cab area

Connector end that stays in the engine compartment

Figure 11.5

Step 7: Mounting Front Strobes

Locate the van front bumper.

Please note that in 2022 the bumper changed, so placement of the strobes will need to be modified slightly.

For 2021 and older, measure 1" down from the bend in the black plastic trim and 1" over from the white bumper edge. Refer to figure 12.1, strobe locations are circled.

For 2022+ center the strobe between the top bend edge of the black trim and the top edge of the new cut-out. Use your best judgment on the horizontal placement. Refer to figure 12.2, strobe locations are circled.

Use the strobe as a template, mark the center hole location on the panel (for routing the wires through).

Drill a 1/2" hole for the wire pass through on the strobe.

Route the strobe harness connectors through the holes.

Only silicone the hole the holes on the inside of the vehicle.
DO NOT SILICONE ON THE OUTSIDE OF THE VEHICLE.

Connect the strobe to the strobe harness and tape up the non-needed blue or yellow wire.

Place the strobes in their desired locations and fasten them onto the bumper with the strobe light supplied screws. Drill pilot holes for an easier installation. Figures 12.3 and 12.4.

*****TORQUE STROBES TO 10-IN-LB'S MAXIMUM*****

Do this for both side strobes.

Beacon Install—If Applicable

Beacon and mount pictures are for reference only. Please refer to product structure/spec sheets for the actual beacon/mount for the install.

Figure 13.1

Step 1: Routing (Refer to routing diagrams at the beginning of the instructions)

Locate the beacon harness # 67114 or 67115.

Connect the harness to the switch harness (one of the remaining unused connectors) in the driver's foot well.

Figure 13.1.

Locate the driver's side door sill area.

Figure 13.2.

Carefully route the beacon harness through the door trim down to the floor.

Continue routing the harness down to the floor, under the sill trim, and under the driver's seat.

See figure 13.3 for the routing path.

Re-insert trim that was pulled up after routing.

Route the harness up the partition and secure with zip-ties. Figure 13.4.

Figure 13.2

Figure 13.3

Figure 13.4

Figure 15.1

For ladder rack mounted beacon:

Step 1: Locate the rear driver's side D-pillar corner. Mark a location in the corner that will not interfere with the ladder rack foot mounting, but as close as possible.

Figure 15.1 for reference location.

Drill a 5/8" (to fit the cable gland on the beacon harness) in the center for the wire pass through.

Route the beacon wire harness through the OEM channels to the d-pillar, then through the hole and insert the cable gland. Tighten the cable gland. Secure with zip-ties.

Figure 15.2

Step 2: Refer to next page if beacon does not have a connector on the wire ends. Locate the beacon, beacon cage, and mount.

Run the beacon wires through the tube of the mount before mounting.

Use the provided nut, screw, and washer to mount the cage and beacon to the mount. Figure 15.1.

Figure 15.3

Assemble the beacon mount feet by inserting the bolt (FAS0799) through the lock washer (FAS0588) then flat washer (FAS0552) then through the foot into the slide. Do not tighten down at this point. Figure 15.3.

Step 3: Connect the beacon harness to the beacon now. You will need to remove the cap on the beacon harness. Tape up the un-needed yellow wire. Tuck the connector part of the harnesses up into the tube for easier routing.

Slide the beacon/mount to the center of the rail. Be cautious of the wire sliding through the rail. Figure 15.4.

Tighten the bolts once you have positioned the beacon. Figure 15.5.

Figure 15.4

Figure 15.5

Figure 15.1

Figure 15.2

For beacon's without the connectors:

Locate the connector housing inside the lightbar/beacon box. Figure 15.1.

Note if it has a red insert inside the connector or not. Refer to figure 15.2 for red insert inside the connector.

Insert the lightbar wire terminals into the connector. **See steps below:**

In these steps be very careful to place the terminals into the correct side of the connector.

Line the red wire terminal up with cavity #1 and the black wire terminal up with cavity #2. Figure 15.3.

Note the connector has a "1" and a "2" noted on the connector (circled in red). Figure 15.4. The red wire will be inserted into the #1 cavity of the connector. The black wire will be inserted into the #2 cavity on the connector.

Be sure to align the terminal prongs up with the inside of the connector pin outs.

Carefully insert the terminals into their designated section. Figure 15.5.

Also be sure the terminals snap into position. You should feel or hear a click when they are correctly inserted.

Pull on the wiring to be sure the connectors have been inserted completely.

If not already done:

Insert the red plastic piece into the top end of the connector. This will also click into place. Figure 15.6 and 15.7.

Silicone the grommet/wiring.

Figure 15.3

Figure 15.4

Figure 15.5

Figure 15.6

Figure 15.7

*****Be cautious the wires are not pinched after tightening the slides*****
See figures 16.1 and 16.2 for reference.

Step 4: Ladder Rack Routing

Option 1: (The preferred option)

Drill a 3/8" hole from the top channel to the bottom channel, 2" to the right of the where the foot mounts to the rail. See picture to the left for reference.

Route the wires in the top rail channel (before inserting the weather strip) to the drivers side area, through the hole in the rail, and down the foot to the hole in the roof. Figure 16.3.

Option 2: Drill a 3/8" hole from the top channel to the bottom channel directly under the beacon mount in the middle crossbow. Then route the wires through the hole to the bottom channel and down the channel to the end of the rail, drivers side.

On 68" the rack, measure 34" from the end. On the 58" rack measure 29" from the end.

Use the tek screws (FAS0842) and nylon clips (66843) to secure the wiring under the utility rack.

Routing is shown in yellow in figure 16.4. The hole is drilled beneath the beacon from the top channel to bottom.

Where you route the wires will depend on what all options you are installing on the utility rack.

If you are installing a few accessories onto the rail that mount to the bottom channel, use the top channel for wire

Insert the fuse into the inline-fuse holder on the power harness. The install is now complete. Secure all wiring with zip ties. Re-attach all trim. Re-assure all pass through holes have been silicone. Double check the functionality of the lights and switches.

PART NUMBER

13905-0

ITEM DESCRIPTION: WIRE TIE, NYLON 40Lb, 8.5" BLACK

MANUFACTURER: WAYTEK, INC. or equivalent
MANUFACTURERS PART NUMBER: 21093M or 21093C

SPECIFICATIONS: STANDARD CABLE TIE
 BLACK, NYLON
 8-1/2" LONG
 TENSILE STRENGTH: 40.0 LBS
 21093M = 1,000 quantity
 21093C = 100 quantity

Please check information to confirm accurate vehicle specifications.

CLEANING INSTRUCTIONS All surfaces must be considered contaminated. Clean the vehicle surface immediately before applying the film. Dust and other contaminants can collect quickly on the surface and prevent the film from adhering properly. Even a freshly painted surface can collect dust before graphics can be applied.

For the best success with the films recommended for vehicle graphics, always apply the graphics when the air and vehicle surface are both above 60°F (16°C) and below 90°F (32°C) before beginning the installation.
